

Programmable Settlements & Payments
Platform for the Travel Industry Supply Chain

Industry Context

Travel distribution involves multiple actors exchanging bookings, funds, and data across complex networks

Settlement and payments are typically handled separately from operational workflows, creating friction

THE PROBLEM

- ⊗ Operational processes rely on fragmented tools and manual reconciliation
- ⊗ Payment and settlement flows span many counterparties and currencies
- ⊗ Deposits, payouts, and exceptions are managed outside core operational systems

THE SOLUTION

- ✓ Stablecoin treasury + smart FX routing per payout
- ✓ We pick the lowest-cost corridor (stablecoin ↔ fiat) and surface bps saved
- ✓ Regional partners for fast, cheap ramps and compliance SLAs; corridor policies are configurable

Why this approach

Coordinated Settlement Layer

Introduces a unified layer rather than isolated payment tools

Aligned Workflows

Aligns operational and financial flows without replacing existing systems

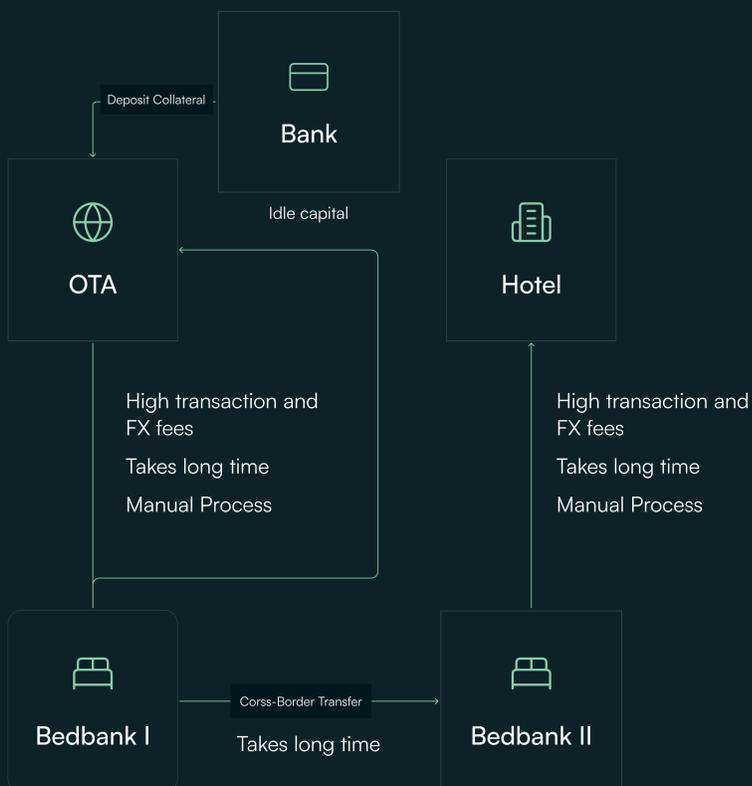

Multi-Party Orchestration

Focuses on orchestration across parties instead of bilateral transactions

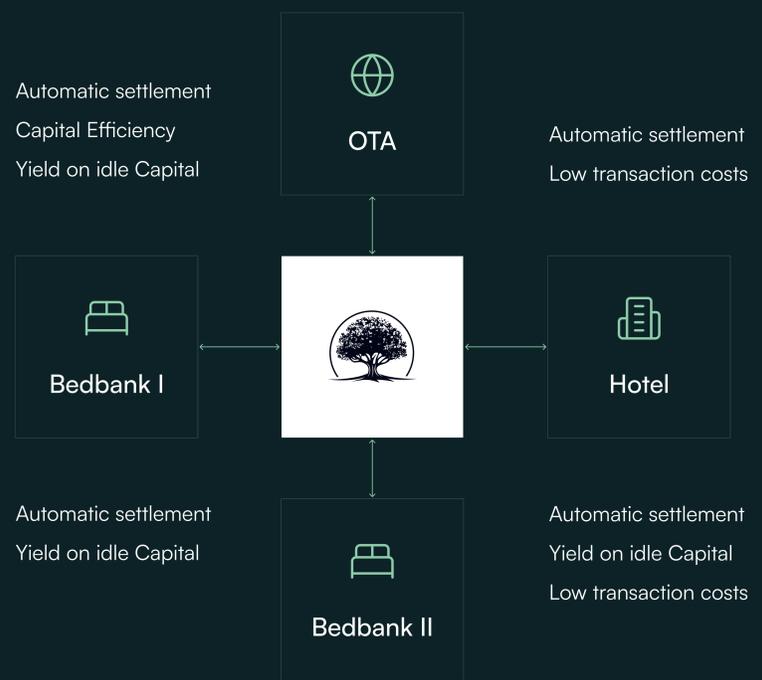

CURRENT INDUSTRY

The travel industry has a tangled mess where everyone pays everyone:

EXPEREON

We centralize payments through one platform:

Measurable Reduction in Risk, Cost, and Complexity

\$11-18M
Value per \$1bn GMV

60-80%
Ops Cost Reduction

Minutes
Settlement Time (vs weeks)

20-40 bps
FX savings

10%
Up to 10% Yield

90%
Cheaper Transactions
